

ENHANCE

your experience of swimming

*One of the great pleasures in life
is to have your own private pool.*

To begin your day with an energetic workout or to unwind in the evening or at the weekend with a relaxing dive into warm, crystal clear water is as much a tonic for the mind as it is a therapy for your body.

Swimming is one of the best forms of exercise. Your own swimming pool is a focal point for quality time spent with friends and family.

We want you to benefit as much as possible from your pool in as many ways as possible.

*We have put together a collection of the **latest ideas, products and technologies** that can be installed in an existing pool to improve your experience of ownership.*

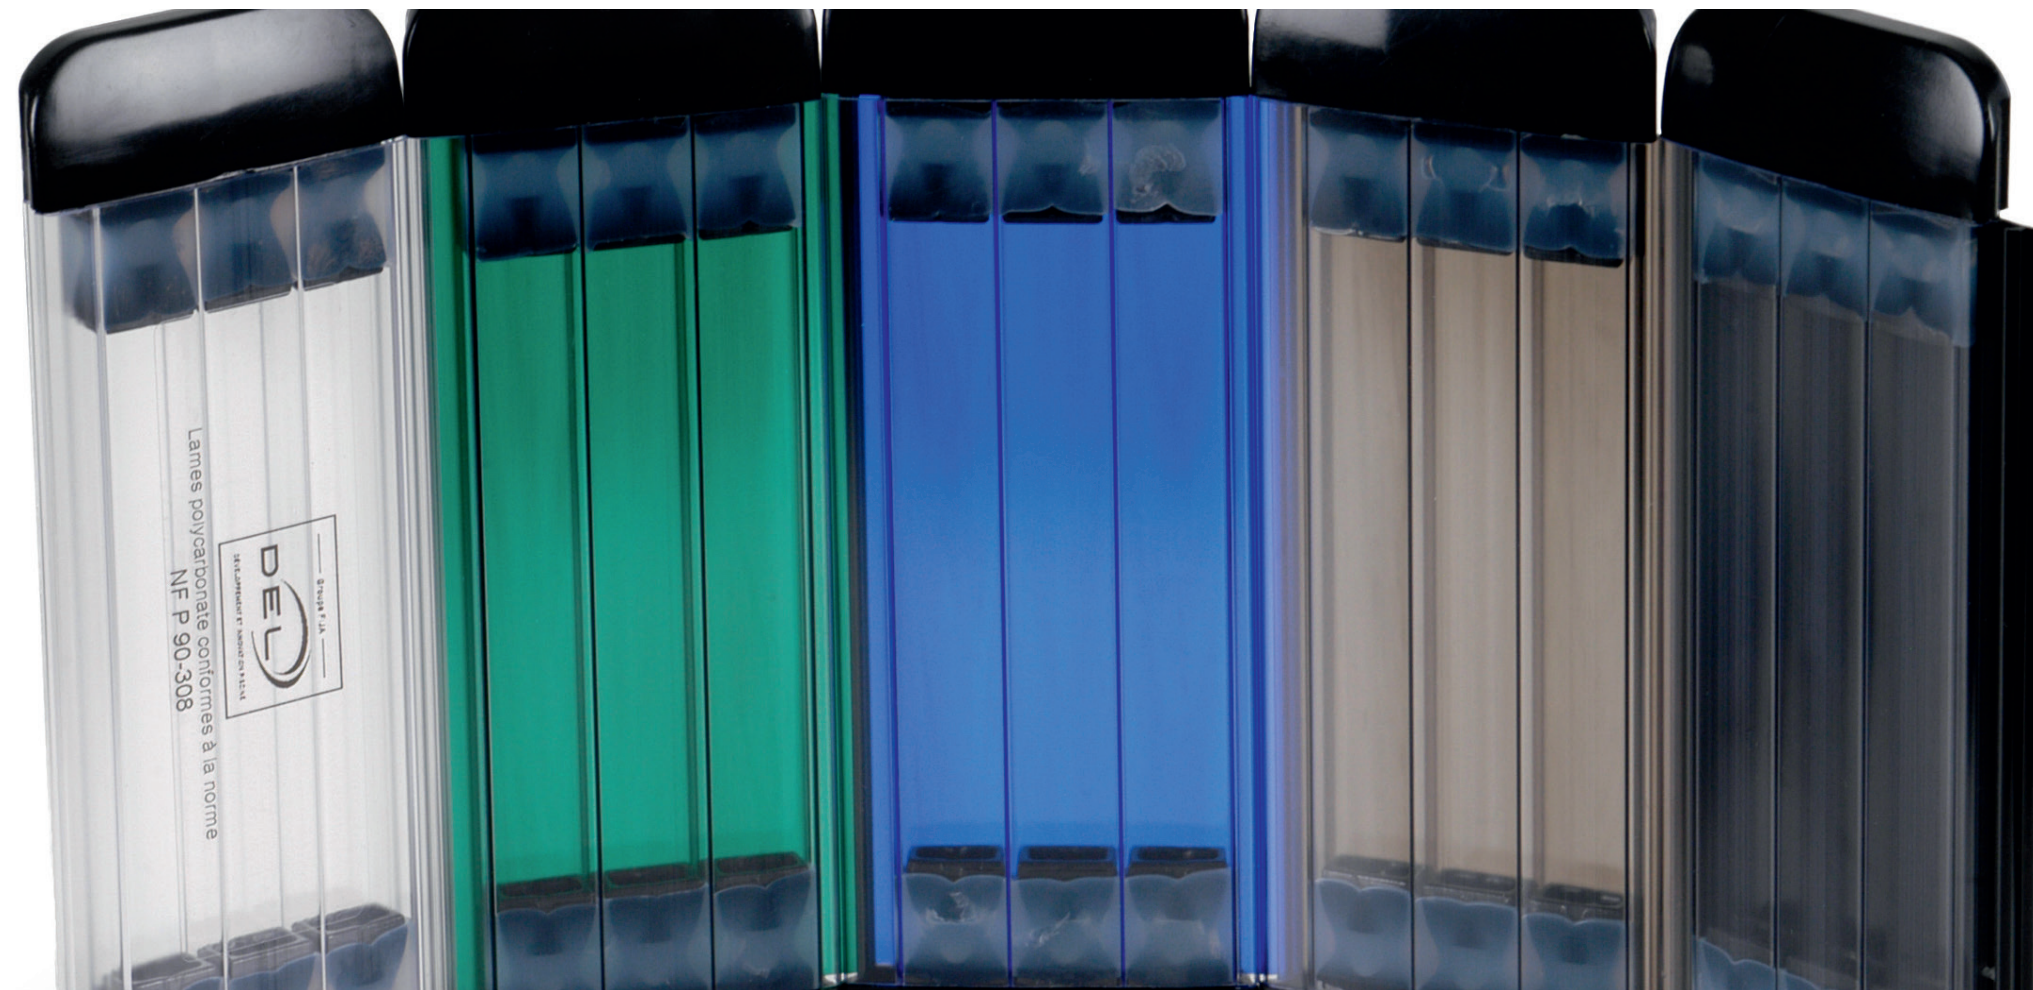

Of course, if you are building or planning to build a new pool, all these innovations can be specified to be included in your new build.

Your pool may already have a slatted cover but there are benefits to be had from upgrading that cover.

Over time, existing slats can become discoloured and damaged. DEL replacement slats fit 99% of existing covers and will immediately give your pool a fresh new look.

DEL slats are cut to the exact dimension of your pool and are available in a wide range of colours to give you design options plus they are also available in translucent poly-carbonate for solar gain – the slats absorb the sun's rays and help heat your pool, saving on your energy usage.

GC PoolCop.

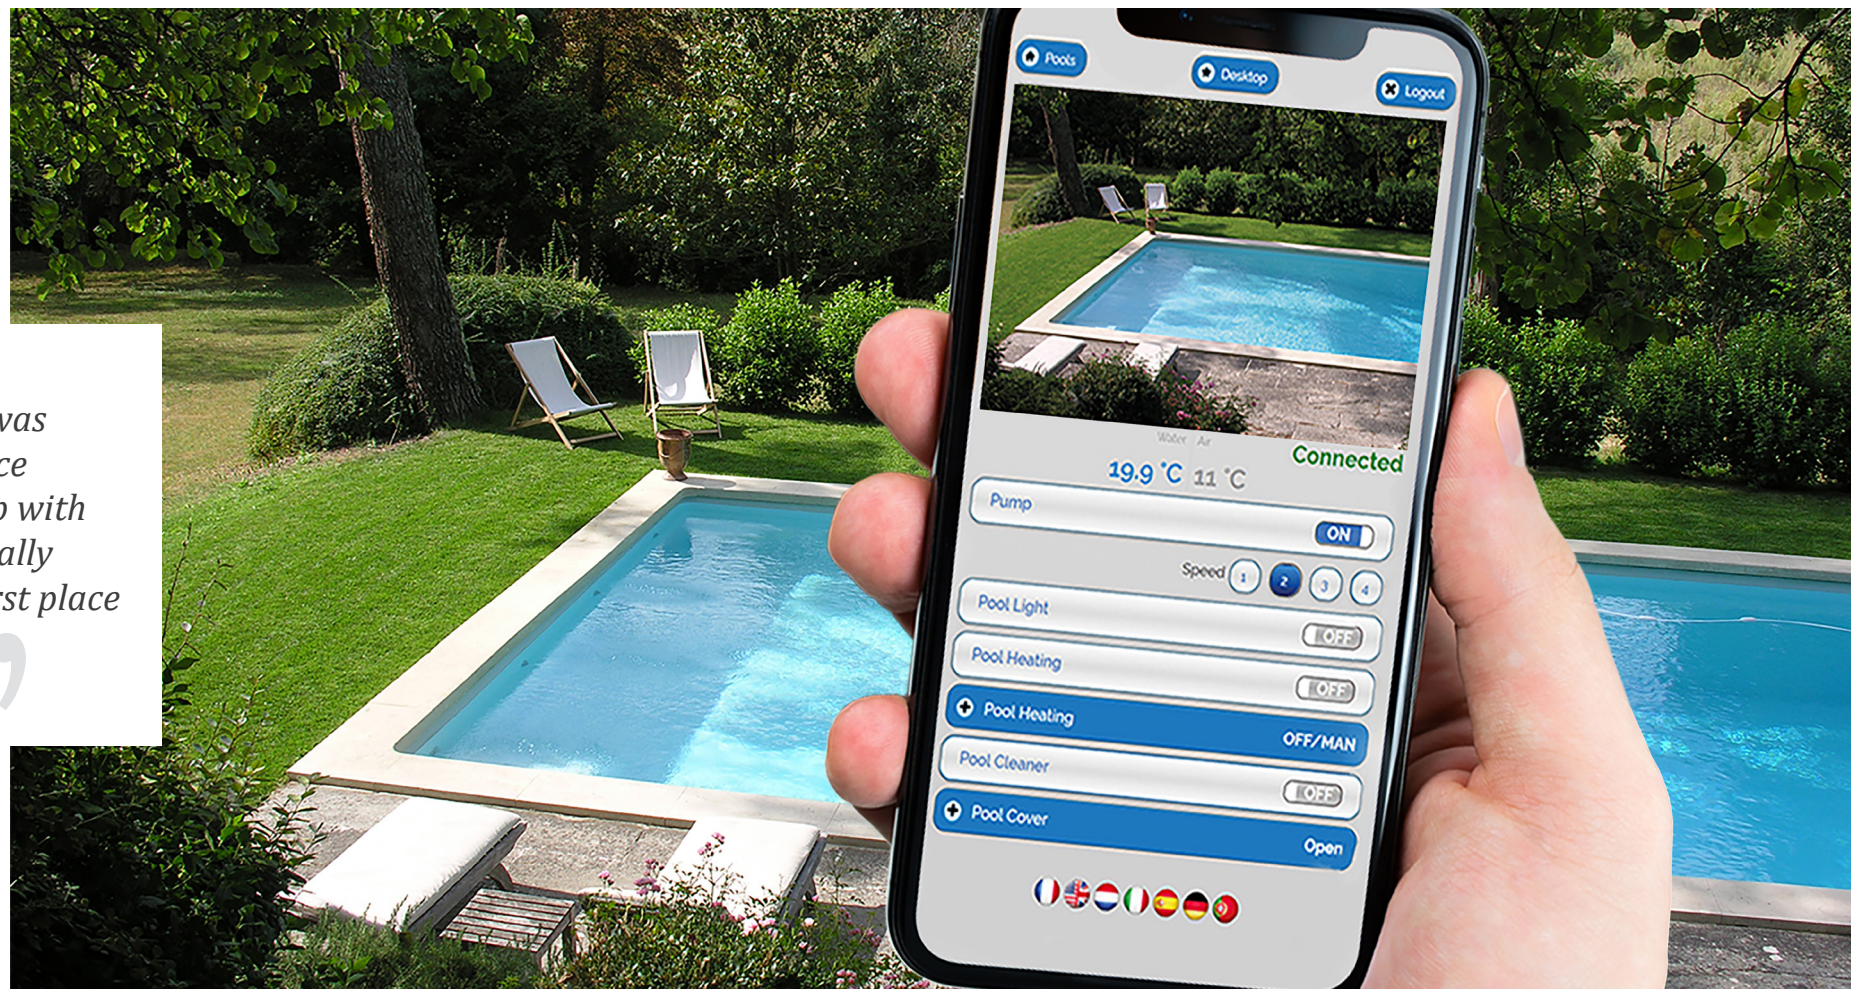

Keeping the water in your pool clean and crystal clear can sometimes feel like an impossible task but the GC PoolCop is like having a pool engineer in your pump room all the time, making sure that everything is just right.

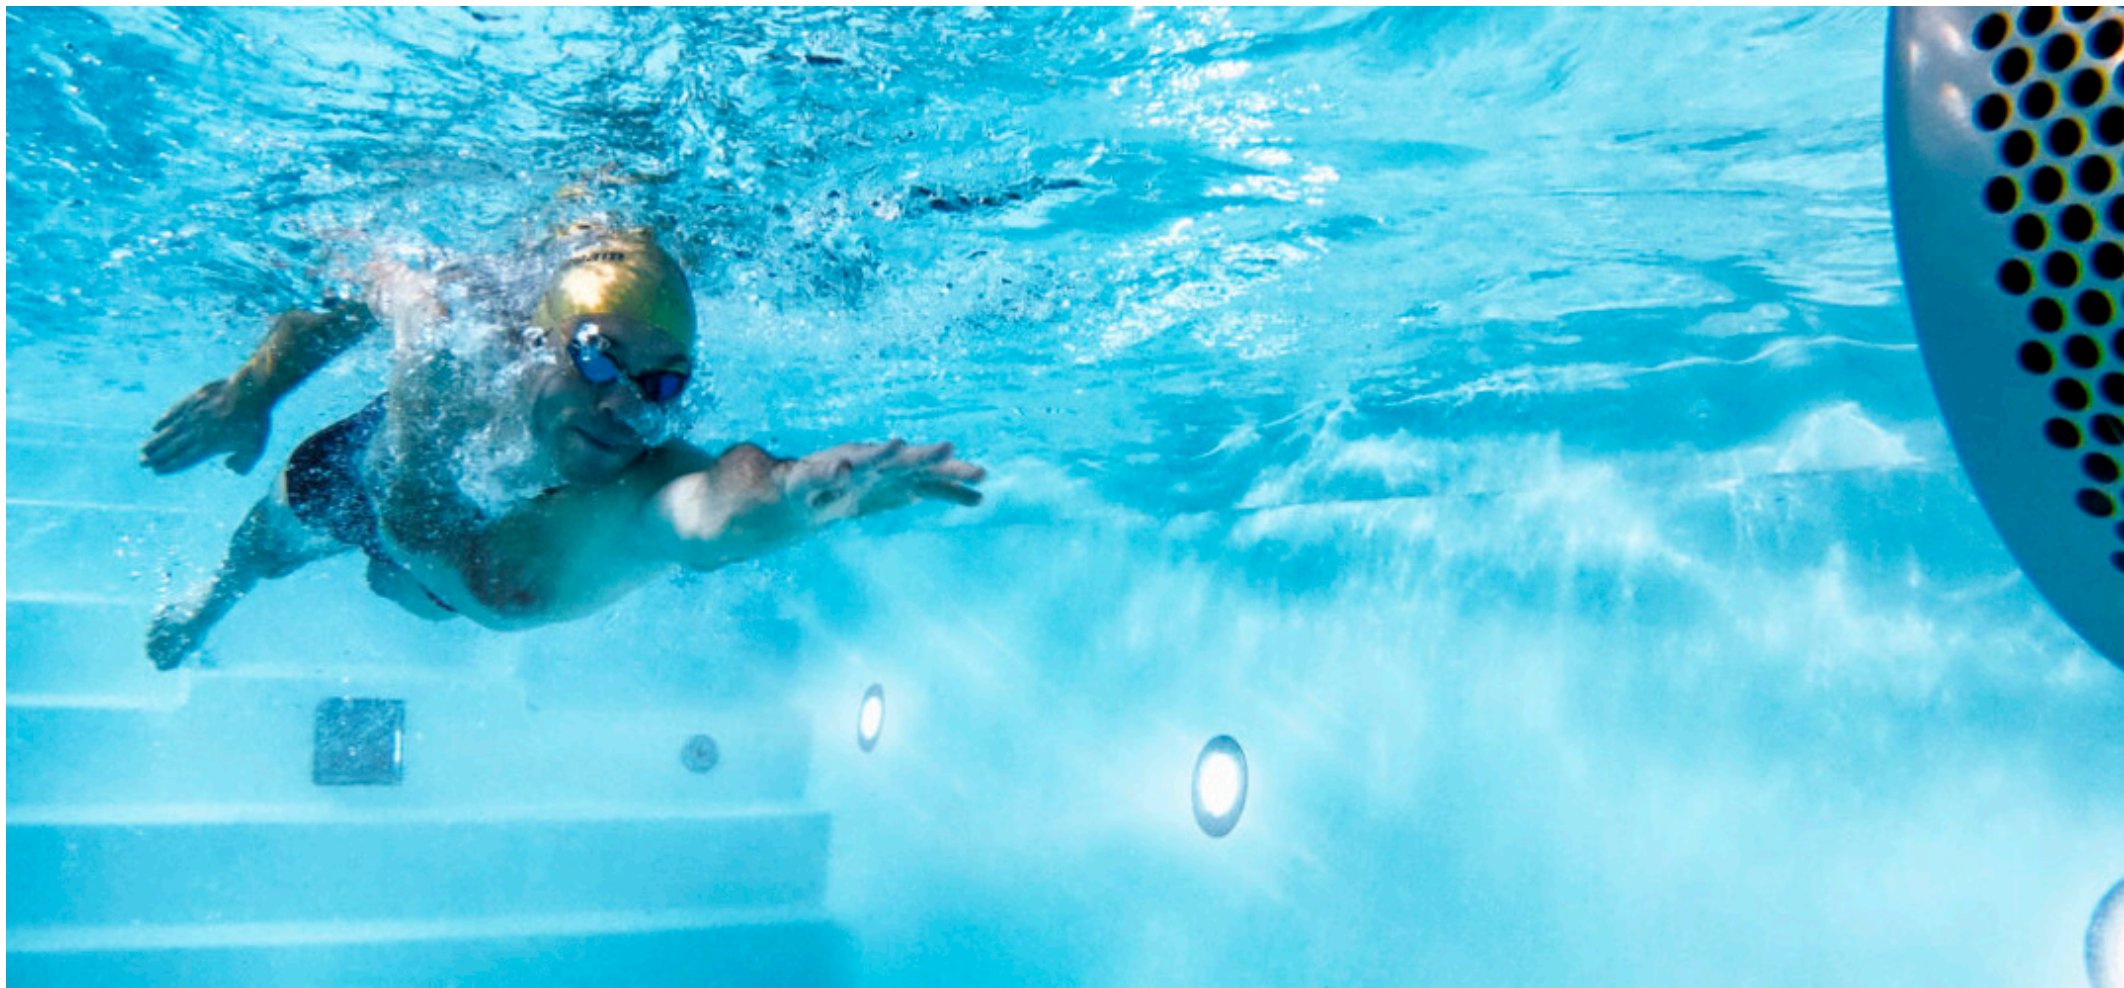

PoolCop is the first and only device that manages filtration as the first step to better water quality. This logical and practical approach results in a sparkling pool with fewer chemicals, less energy consumption and far less effort.

PoolCop is a recent innovation but it's already found a lot of fans.

“Before I installed a PoolCop my pool was a constant source of stress for me. Once PoolCop was installed my relationship with my pool changed completely and I finally discovered why I built a pool in the first place – swimming, fun and family time.”

The PoolCop is an easy upgrade to any pool equipment room; the main unit is installed in place of the existing multiport valve, the communication unit is mounted next to the pool's electrical box. That's it.

Get the most out of your pool with EVAstream.

Counter-current units have become a popular addition to many swimming pools and the EVAstream is one of the very best.

By providing a current to swim against, the EVAstream can transform your swimming pool into a training pool suitable for a professional athlete, a home-fitness facility or even a water park attraction with a water rapid and dynamic underwater volcano. Requiring just a single-phase supply, EVAstream is the most powerful and compact counter-current swimming machine available. The EVAstream offers the serious swimmer an endless pool as well as endless fun for the family.

GC Crystal EasyFeed

The less time you need to spend maintaining your pool, the more time you can spend enjoying it.

The GC Crystal EasyFeed is an affordable solution for automating pool and spa water treatment. Quick and easy to install, the controller uses integral peristaltic pumps to dose pH and ORP straight into your pipework. The Crystal EasyFeed is simple and safe to use and maintains your water quality even as you are swimming – which is how things should be.

The DEL Tixit pool cover sounds as good as it looks.

Play your favorite tracks as you swim your laps.

The Tixit is an above-ground automatic slated cover with an option for built in Bluetooth speakers. The end stands, that house the speakers, are a slim and modern design; the slats are available in a range of colours to match your pool's aesthetics.

The cover can be closed in a matter of minutes and locked to prevent anyone entering the pool. A wireless Wi-key control box can remotely operate the cover. For safety, style and fun, you will be singing the Tixit's praises.

A close-up, black and white photograph of a heat pump fan grille. The grille consists of numerous curved, parallel slats that create a circular pattern. The lighting is dramatic, with strong highlights and deep shadows, emphasizing the texture and curvature of the slats.

*The heat pump has really come of age; whisper quiet, **high performance**, connected and coming to a pool near you. **They multiply the amount of heat that can be produced** from each kWh of energy by drawing warmth from the air to put into your pool.*

For this collection we have selected the Dura Pro heat pump.

Duratech pool heaters are designed and manufactured in Belgium using high quality components to produce an efficient and reliable pool heater.

The Dura Pro is whisper quiet and very easy to control. The heat pumps come in a range of sizes and we will advise on the appropriate one for your pool.

A heat pump is one of the most efficient options available for heating your pool water and the Dura Pro is one of the most efficient heat pumps available. It will start to pay back your investment on the very first day.

EasyFit. The name says it all.

Installing a replacement pump or upgrading to a more modern and efficient one is something that often leads to costly re-plumbing – but it doesn't have to be that way.

The EasyFit from Speck has a range of connection kits that allow you to install a new replacement pump for at least nine leading brands without the need for costly and time-consuming re-plumbing. The EasyFit pump itself is exceptional efficient using 20% less power than the industry's most popular pumps and comes in a range of eight sizes so one is guaranteed to be a perfect fit for your pool.

Variable speed pool pumps from Speck.

Variable speed pumps are capable of running at different speeds and generating different flow rates. Running at a slower speed affects the power consumption and does so more significantly than you would imagine.

If a pump speed is reduced by only 450 RPM, from 3,450 to 3,000, then the reduction in flow rate is negligible but the energy reduction will be in the region of 50%. The advantages of having control over a pool pump over and above simply 'on' and 'off' are obvious. A pump constantly running at full power will use more energy, generate more internal wear and produce more noise.

Green pumps from Speck.

Pool owners want to do their best to protect the environment. Circulation pumps are the heart of a pool and choosing or changing to a more efficient pump will make a significant difference to your environmental impact.

SPECK GREEN products – Eco Touch pumps and Eco Logic pump controllers – use innovative technology for maximum sustainability in both their production and operation. The aim is always to help you run your swimming pool in as environmentally friendly a way as possible.

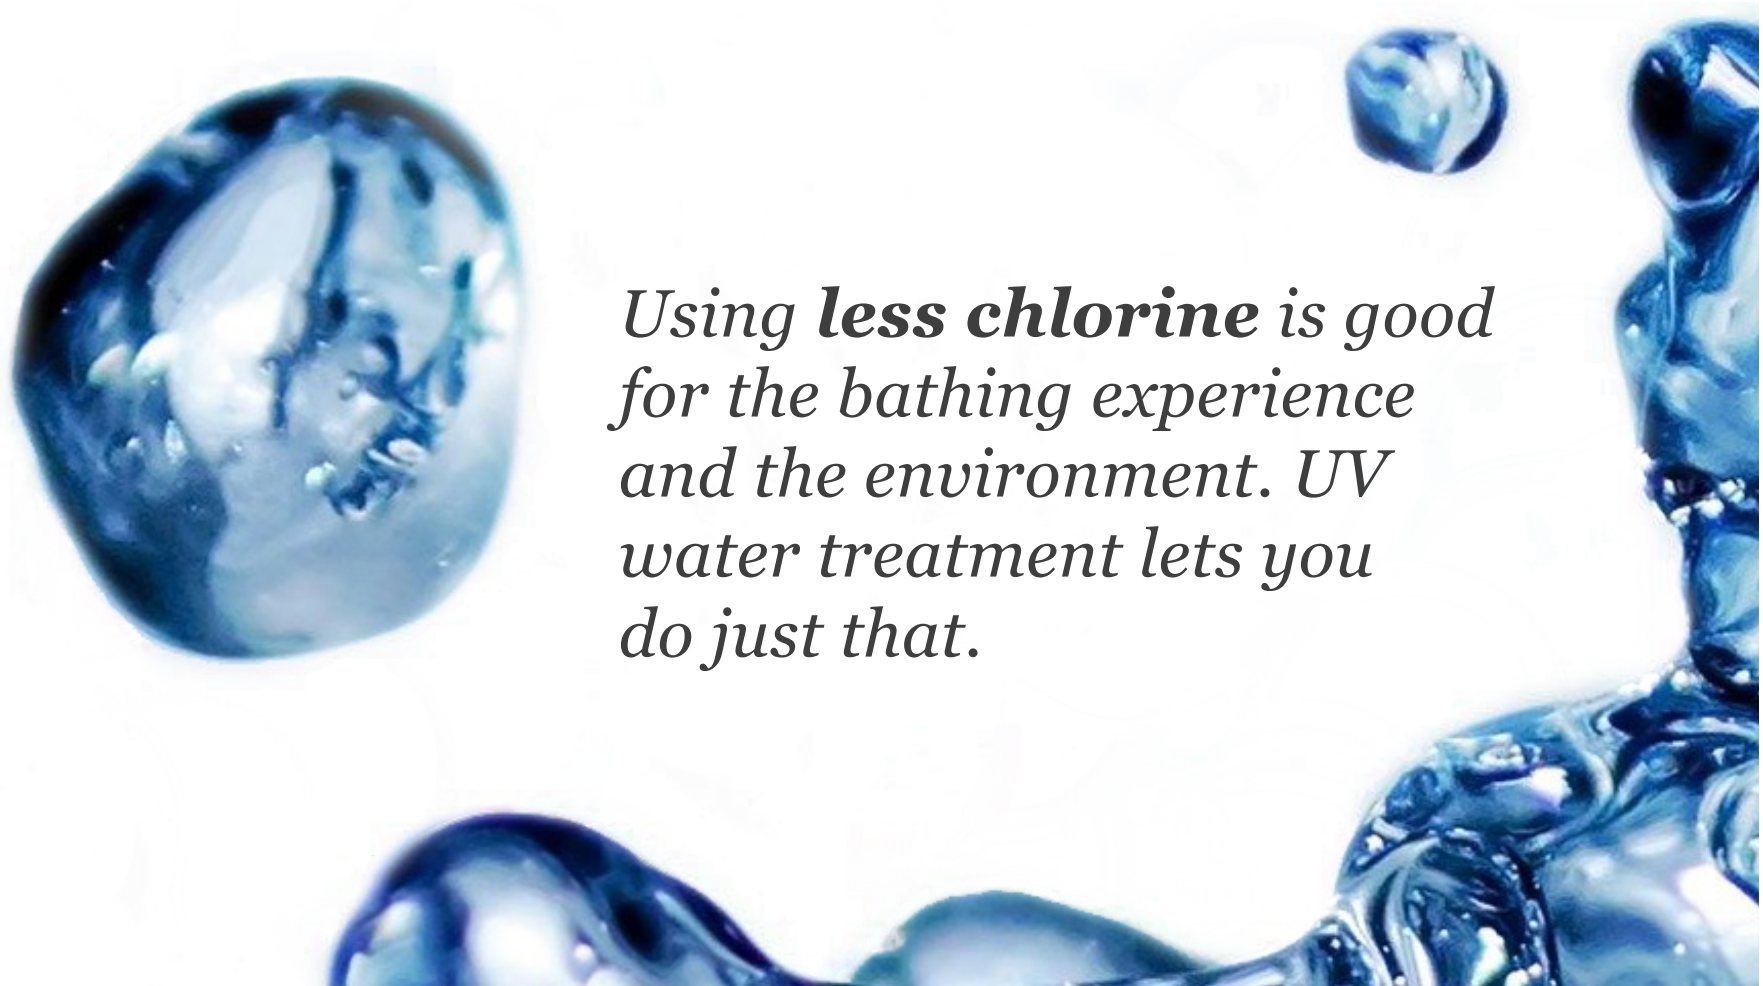

UV water treatment is clearly the better option.

Reducing the amount of chemicals you use to treat the water in your swimming pool has a lot of advantages. UV water treatment means a 50-80% lower chemical consumption so no 'chlorine smell', less skin and eye irritation and a better water 'feel'.

UV water treatment systems use a cylindrical container inside which is a UV lamp; pool water is simply pumped through the chamber and dosed with UV light as it passes through.

The BIO-UV system from water treatment specialist, Triogen, is a stainless steel unit in a range of sizes, designed to fit most pools and has a 13,000-hour UV lamp life. The BIO-UV Delta system has a PVC body, can be installed indoors or outdoors and includes a high output, low-pressure UV lamp.

Easy to install, both systems start delivering benefits immediately and it's clear to see why UV water treatment is becoming so popular.

*Using **less chlorine** is good for the bathing experience and the environment. UV water treatment lets you do just that.*

Time to look good, time to shine.

From creating a chilled out and relaxed atmosphere through to light shows for parties, the right lighting system can change the way your pool is used at the flick of a switch.

Spectravision is the perfect LED lighting system if you want to be able to change the mood of your pool to suit different times and different uses. The Spectravision system is available in two models; one producing a pure moonlight white light, with the other offering 16 magical colours of mood lighting. The lighting unit itself is ultra-flat and fits into an existing niche for retrofit.

GC Hub.

GC Hub Control Panels are tailored to meet the needs of individual projects and absolutely nothing is off the shelf. Equipment controlled by the panel doesn't have to be limited to pumps and filtration; lighting, heating and air handling can just as easily be run from the GC Hub.

Each panel design starts with an efficient specification process so that a custom-fit solution can be created.

GC Hub really is the ultimate upgrade to your pool.

*Your pool is unique to you,
your family and your lifestyle
and so, it makes sense to have
an automated control system
built just for you.*

The background of the entire page is a photograph of a swimming pool and a house. The pool is in the foreground, and the house is in the background. The image is slightly faded to make the text stand out.

Get in touch and find out more.

There really is a lot that we can help you with to get the very best out of your pool and the easiest way to get started is for you to contact us and make an appointment for us to visit you at your convenience.

We look forward to helping you fall in love with your pool all over again.
